

AN ESSENTIAL TOOL

for your fire department

RISK OF INJURY

The water dropped by water bombers can cause serious injuries. For their safety, fire fighters must :

- Quickly leave the area once the water bomber has made an inspection run (low altitude pass to identify the target without dropping water);
- Maintain a distance of 150 metres between target and their work area, during an intervention along the same fire perimeter.

DANGER DE BLESSURES

Le LARGAGE D'EAU par les AVIONS-CITERNES peut causer des blessures sérieuses. Pour leur sécurité, les combattants doivent :

- s'éloigner rapidement après que l'avion-citerne ait effectué une passe à blanc (vol à basse altitude sans largage pour indiquer la cible);
- maintenir une distance de 150 mètres entre la cible des largages et leur site de travail, lors d'une intervention simultanée sur la même bordure.

What is it?

- A safety reminder sticker.

Who is it for?

- The municipal fire chief.

Why?

- To increase safety during suppression activities when water bombers and municipal fire fighters are both working on the fire.
- To remind municipal fire fighters of safety precautions to take when setting out for a fire.

Where should it go?

- Affix to the dashboard of all fire department vehicles.

To order :

Complete the order slip for prevention material
